

I give you this message because I was unaware of the value of chiropractic care for the treatment of my long history of medical conditions.

I began treatment at Revolution due to numbness in both of my hands. After my initial evaluation, I was told it was due to my neck and shoulders overcompensating for my lower spine scoliosis. I knew about my scoliosis and it had never given me pain but only cosmetic deformity.

After a few weeks of treatment, I regained all the feeling in my hands and actually didn't have any neck pain. My treatments continued and I regained many functions I didn't realize were missing. I had an upset in treatment after a car accident which sent me back to a condition worse than before, but we are working through it to get to optimal performance.

My research on Chiropractic care brought me to a decision to examine my history of taking medications for high blood pressure and cholesterol. With the support of my Internist, I have decreased my blood pressure medication. ***My blood pressure (on full medication) before treatment at Revolution ran 140/84 for the previous 3 years. My blood pressure (on half strength) with chiropractic care at Revolution is now 120/64 on a daily basis. My cholesterol (with medication) before chiropractic care at Revolution was 230 for 10 years. My cholesterol (with medication) is now 160 with the balance perfect.***

It is time I think about going on a lower dose of cholesterol medication and I will discuss this with my Physician at my visit next week.

My physical condition played no role in this improvement. I am early 50s, life-long vegetarian, and am in great condition. I have no family history of either condition.

I give you this message because I was unaware of the value of chiropractic care for the treatment of my long history of medical conditions. ***The Doctors at Revolution gave me the tools to healing and I am so grateful!***
